

DBMS – CATEGORY MANAGEMENT

ONE8 Footwear E-Commerce Database

1. Objectives

- Design the Category table.
- Store product category information.
- Insert and manage footwear categories.
- Update category information.
- Retrieve and organize category details using SQL queries.

2. Introduction

The Category table is used in the ONE8 Footwear E-Commerce Database to organize products into different footwear categories. It helps customers and administrators identify and manage products based on their category.

3. Category Table

Attribute	Data Type	Constraint	Description
Category_ID	INT	PRIMARY KEY	Unique ID for each category
Category_Name	VARCHAR(100)	NOT NULL	Name of the footwear category
Description	VARCHAR(255)	-	Description of the category

4. Sample Categories

ID	Category	Description
1	Running Shoes	Shoes designed for running and jogging
2	Sports Shoes	Shoes suitable for sports and physical activities
3	Casual Shoes	Comfortable shoes for everyday use
4	Formal Shoes	Shoes suitable for formal occasions
5	Sneakers	Stylish footwear for casual and daily wear
6	Sandals	Open footwear for casual use
7	Boots	Durable footwear covering the foot and ankle
8	Walking Shoes	Comfortable shoes designed for walking

5. Operations Performed

- Create Category table.
- Insert category records.
- Retrieve all categories.
- Sort categories using ORDER BY.
- Search categories using LIKE.
- Update category description.
- Count the total number of categories.

6. Conclusion

The Category table provides a structured way to organize footwear products in the ONE8 database. It supports category insertion, searching, updating, sorting, and reporting.
